#### **Report on Business**

1. Triple Dragon Resources Inc. (the "Issuer") is a junior mineral exploration and development company. The Issuer currently has one claim in the Northwest Territories known as the Murray Property.

The Murray Property is located directly southeast of Murray Lake within the south-central part of the Northwest Territories. In the Yellowknife district, the Con and Giant Mines, which are hosted by the Yellowknife Greenstone Belt, have produced approximately 14 million ounces of gold since 1938. The Property is situated 10 kilometres southeast of the historic, past-producing Camlaren Gold Mine. Numerous gold bearing quartz veins have been identified on the Murray Property, with the distribution of gold mineralization appearing to be structurally controlled, as many of the host quartz veins are found along the axial plane of distinct folds. The Murray Property has good potential for the discovery of significant gold mineralization and is considered under-explored for turbidite-hosted gold deposits.

  - b. Mineral exploration and development involves a high degree of risk and few properties which are explored are ultimately developed into producing mines. There is no assurance that the Company's exploration and development activities will result in any discoveries of commercial bodies or ore or minerals. The long-term profitability of the Issuer's operations will be in part directly related to the cost and success of its exploration and subsequent evaluation programs, which may be affected by a number of factors. These include the particular attributes of the mineral deposit including the quantity and quality of the ore, proximity to or cost to develop infrastructure for extraction, financing costs, mineral prices and the competitive nature of the industry.
  - c. Governmental regulations including those relating to prices, taxes, royalties, land tenure and use, the environment and the importing and exporting of minerals are of
